Fullwhite Screen

Projection screen with invisible frame

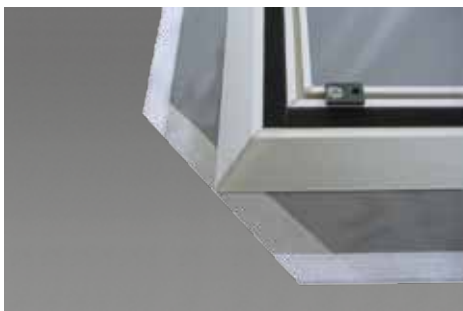

The further development of mobile projection screens for applications where invisible technology and puristic design is required. With the minimalistic design this projection screen fits easily in every optical superior installation. Universal, invisible mounting option as well as high stability and flexibility are proven by our philosophy of projection screen systems.

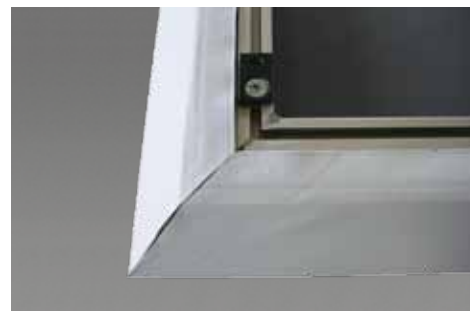

The plug-in frame system (patent pending) is characterised by maximum flexibility and allows nearly every frame size.

The universal fittings, which can be positioned variabel in the rabbet, allow different mounting options, f.e. flying screen or wall installation.

A tear-resistant fabric, which is set-in the corner areas of surface, guarants high safety and durability.

The projection surface is tensioned over the frame and fixed on frame backside with hook-and-loop tape.
