Power & Versatility

Networked Room Controller (PX2-NRC-1142)

The Networked Room Controller functions as an independent, web-enabled controller for any display device. With a robust Ethernet interface, it makes configuring, controlling, and monitoring equipment on your network easy—no expensive programming required. Ideal for monitoring multiple rooms, scheduling, and digital signage applications.

All you need for the simple room Includes one bidirectional RS-232 control port, one infrared (IR) control port, four low-voltage relays for screens or lifts, and two general purpose sense ports for security and theft detection.

Simplified wiring Includes adapters for common pinouts of 9-pin or 15-pin D-Sub RS-232 control ports on most modern display devices.

Lightweight, attractive, low-profile Easily attaches to virtually any display device and blends into the decor of any room.

Web-based configuration, control, monitoring, and management Configured through a friendly AJAX-powered web interface, which supports both SP Controls' extensive library of Drivers, and on-the-fly Driver creation and customization (new IR codes can be learned with a paired PixiePro Modular Panel).

Versatile and expandable Designed to seamlessly integrate with the PixiePro line of products to provide a complete solution that is flexible and expandable for virtually any room configuration and any budget.

Control Pucks

Expand the Networked Room Controller's already extensive capabilities to control virtually any audiovisual device in your room. Simply daisy-chain additional Control Pucks (up to 32), using CAT5 cabling as the method for interconnection. Controlling more devices has never been easier. Control Pucks are available in three configurations

PX2-PUC-REL-4
Four low-voltage relays

PX2-PUC-232-IR
One RS-232 port + one IR out

PX2-PUC-IR-4
Four IR out
(includes four IR emitters)

Integrated design

Use the Networked Room Controller independently or as part of a complete room solution when combined with a PixiePro Modular Panel as the front-end control panel.
